

MARTIN ŠULÁK

I am an Artificial Intelligence student at FEI TUKE with an interest in software development, web technologies, IT support, and IoT projects. I have experience with both personal and client projects, and I enjoy learning new technologies through practical solutions.

WORK EXPERIENCE

FULLSTACK WEB DEVELOPER

ING. ROMAN HOVANEK AUTOŠKOLA ROKA / SPIŠSKÁ NOVÁ VES, SLOVAK REPUBLIC / SEPTEMBER 2024 - CURRENTLY

Designed and developed a responsive website for a local driving school, focusing on clean presentation, mobile usability, visual assets, social media integration, and clear communication of key business information. Worked on layout, design, deployment preparation, and overall online presence.

FULLSTACK WEB DEVELOPER

PP AUTO S.R.O. / POPRAD, SLOVAK REPUBLIC / JULY 2022 - CURRENTLY

Created and continue to improve a modern web platform for a car dealership, focusing on clear vehicle presentation, a smooth user experience, and adapting the website to real client needs. I also worked on design improvements, mobile responsiveness, content structure, and overall website usability.

QUALITY INSPECTOR

ELTEK S.R.O. / LIPTOVSKÝ HRÁDOK, SLOVAK REPUBLIC / JUNE 2024 - AUGUST 2024

Worked on quality control of manufactured components according to technical documentation and internal standards. Performed visual and functional inspections, identified defects, and recorded inspection results. When issues were found, I collaborated with the production team on resolving them and improving processes.

COURIER

DPD, S.R.O. / POPRAD, SLOVAK REPUBLIC / APRIL 2024 - JUNE 2024

Worked as a courier for DPD, where I was responsible for delivering parcels to customers according to assigned routes and schedules. I communicated with customers on a daily basis, worked with a scanning device and the DPD mobile system, handled common delivery situations, and ensured proper package handling and compliance with company procedures.

IT ADMINISTRATOR

VÁŠ LEKÁR, S.R.O. / MAY 2021 - DECEMBER 2022

Worked as an IT Administrator within vaccination centers during the nationwide COVID-19 vaccination program. Provided technical support, managed IT equipment, resolved system issues, and supported users during daily operations. I also helped set up digital tools for patient registration, data processing, and smooth technical workflows in cooperation with medical staff.

INTERESTS OR HOBBIES

I am interested in programming, artificial intelligence, web development, IoT devices, automation, and modern technologies.

DRIVING LICENSE

ADDITIONAL INFORMATION

Alongside my studies, I work on my own projects, mainly web applications, desktop tools, and technical solutions with practical use. I have experience working on real client projects, managing websites, deploying applications, and solving technical problems. I am open to internships, part-time cooperation, or a junior position in IT, software development, technical support, or AI.

Technical University of Košice / Košice, Slovak Republic / September 2024 - Currently

I am currently studying a Bachelor's degree program in Artificial Intelligence at the Faculty of Electrical Engineering and Informatics, Technical University of Košice. My studies provide me with a foundation in computer science, mathematics, data analytics, and artificial intelligence. I focus on programming, algorithms, data structures, database systems, machine learning, data processing, computer vision, and intelligent systems. The program also includes practical project work focused on solving real-world problems using modern AI technologies.

SECONDARY INDUSTRIAL SCHOOL OF TECHNOLOGY

Mechanical Engineering

Spišská Nová Ves, Slovak Republic / September 2018 - June 2022

I studied Mechanical Engineering with a focus on CNC machine programming and graphic technologies. During my studies, I gained a technical foundation in mechanical design, technical drawing, 2D and 3D modelling, CAD/CAM technologies, and working with CNC machines. The program gave me practical experience in designing components, creating technical documentation, and using digital tools in manufacturing processes.

COURSE OR CERTIFICATE

INTRODUCTION TO PYTHON

DataCamp / May 2026 - December 2026

Introductory Python programming course focused on basic syntax, variables, data types, lists, and simple programming logic. The course helped me strengthen practical Python fundamentals, which I further use in my Artificial Intelligence studies, data work, and technical projects.

INTRODUCTION TO JAVA

DataCamp / May 2026 - December 2026

Introductory Java programming course focused on the basic principles of object-oriented programming, syntax, variables, data types, and fundamental programming logic. The course provided me with a practical foundation for further developing my software development skills.

INTERMEDIATE JAVA

DataCamp / May 2026 - December 2026

Course focused on expanding my knowledge of Java programming. It covered intermediate concepts, object-oriented programming, and the practical use of Java for solving programming tasks. The course built on basic knowledge and helped me better understand the structure and logic of Java applications.

INTRODUCTION TO IOT AND DIGITAL TRANSFORMATION

Cisco Networking Academy / May 2026 - December 2026

Course focused on the basics of the Internet of Things, digital transformation, and modern technologies used in connected systems. I gained an overview of IoT solution principles, data usage, network communication, and the practical possibilities of digitalization.

ELEMENTS OF AI

MinnaLearn / March 2025 - December 2026

Course focused on the basic principles of artificial intelligence, its practical use, possibilities, and limitations. It helped me better understand core AI concepts, machine learning, data work, and their use in solving real-world problems.

MATLAB ONRAMP

MathWorks / November 2025 - December 2026

Introductory course on working in the MATLAB environment, focused on basic syntax, variables, calculations, data handling, and creating simple scripts. The course provided me with a practical foundation for using MATLAB in technical calculations, data analysis, and engineering-related school projects.

SIMULINK ONRAMP

MathWorks / November 2025 - December 2026

Introductory course on working in Simulink, focused on modelling, simulation, and visually building technical systems. The course helped me understand the basic principles of block-based modelling and simulations, which I use in the study of control systems and technical projects.

INTRODUCTION TO SYMBOLIC MATH WITH MATLAB

MathWorks / December 2025 - December 2026

Course focused on working with symbolic mathematics in MATLAB. It covered algebraic calculations, symbolic expressions, and their use in technical and mathematical tasks. The course expanded my MATLAB knowledge by introducing work with exact mathematical expressions and calculations.
